

PremiereGPT

Quick Start Guide & Installation

01. INSTALLATION

MacOS

ARM/Intel

- 1 Open Finder and launch `PremiereCopilot_ARM.pkg`.
- 2 Click **"Allow"** if prompted and follow instructions.
- 3 Relaunch the installer if necessary.
- 4 Open Premiere Pro (restart if it was open).
- 5 Navigate to **Window** → **Extensions** → **PremiereCopilot**.

Windows

x64

- 1 Open File Explorer and launch `PremiereCopilotSetup.exe`.
- 2 Follow the installation wizard instructions.
- 3 Open Premiere Pro (restart if it was open).
- 4 Navigate to **Window** → **Extensions** → **PremiereCopilot**.

Important: Initialization Time

During the first launch and the first AI processing calculation, Copilot may take 30 seconds to 1 minute to initialize. Please be patient, this is normal behavior.

02. HOW TO USE

Podcast Panel

After Copilot starts, click on the **Microphone icon** in the prompt box to open the podcast panel.

Jump Cut Tool

To access the Jump Cut tools, simply click on the **Tool button** located on the prompt box.
